

Product Designer with 4+ years leading end-to-end design across complex B2B2C SaaS products. Known for taking ambiguous problems from discovery through to polished, shipped outcomes, working autonomously as a strong individual contributor in fast-moving environments. Bringing strong UI craft, systems thinking, and a pragmatic, hands-on approach, with experience designing for complex business and consumer workflows. Fluent in AI-integrated workflows, from research and exploration through to prototyping and validation. Passionate about building products that genuinely serve people and making design decisions that move the business forward.

Experience

Product Designer

WORK180, Dec 2022 - Present

- Sole Product Designer on the team, owning end-to-end design across the entire product lifecycle, discovery, research, prototyping, testing and delivery
- Facilitated workshops with a wide range of technical and non-technical stakeholders (Product, Engineering, Marketing, CX) to build alignment and drive clear design direction
- Applied a service-design lens to work through ambiguous, tricky problems, looking beyond individual screens to how a change affects the wider system and the people it touches
- Conducted user interviews, usability testing, and Hotjar behavioural analysis, combining qualitative and quantitative methods to surface pain points and shape product strategy
- Validated features for accessibility and usability, maintaining a high, consistent standard of inclusive design across all deliverables
- Designed and shipped an onboarding experience that grew employer follows 557% (323 → 2,126/month) and unique employer follows 183% (78 → 221/month)
- Built the Employer Progress Hub, a self-service portal integrating a manual DEI assessment aligned to WORK180's equity standards and cut profile launch time from 180 days to 14 and remove reliance on Account Managers
- Led design direction within a tight trio of Product, Design, and Engineering, defining features, refining flows, and keeping delivery feasible and high-quality
- Owned and evolved the Figma design system, ensuring consistency, usability, and scalable collaboration with front-end engineers
- Comfortable operating with a high degree of ambiguity, adapting research plans and design direction as product priorities and evidence evolved
- Claude Code to prototype and validate concepts with real users before committing to a full build.

Product-Led Growth (PLG) Leadership

- Owned and led a cross-functional PLG working group focused on improving activation, engagement, and retention
- Identified growth opportunities through user behaviour analysis and product data
- Rapidly prototyped and tested ideas to validate solutions before development, leveraging AI to accelerate the feedback loop
- Collaborated across Product, Marketing, and Customer Success to align on growth strategies
- Helped embed a culture of experimentation and data-informed decision making

Knack App (WORK180 Product)

- Designing the end-to-end mobile app experience for Knack, a consumer app matching young Australians to paid apprenticeships and traineeships based on their interests rather than a job title.
- Designed the onboarding and career survey flow, discovery and matching experience, and core product features from early concepts through to high-fidelity designs.
- Working closely with the founding team in a fast-moving, small team environment, contributing to product decisions and design direction across the full Web App.

Graphic Designer and illustrator

WORK180, March 2021 - Dec 2022

- Owned brand and marketing design across the business, reports, digital campaigns, marketing assets, illustrations, and EDM communications
- Maintained visual consistency across all customer-facing communications, acting as the quality bar for brand output alongside the marketing team
- Delivered website redesigns and new page creation, bridging the gap between product and marketing design contexts

Core skills

End-to-End Product Design

UX Research & Discovery

UI Systems & Design Systems

Workshop Facilitation

Interaction Design

Service Design Thinking

Wireframing & AI Prototyping

Stakeholder Collaboration

Accessibility & Usability

Cross-functional Collaboration

Continuous Improvement

Human-Centred Design

Tools: Figma, Claude, FigJam, Hotjar, Jira, Confluence, Notion, Adobe Suite and Canva

Certifications

Yummy Labs, 2026 - AI Product Design course
Top AI Design Sprinter

Coursea 2023
Google UX Design Professional Certificate

Designership, 2023
Ultimate Figma masterclass

Education

Otago Polytechnic, 2013 - 2015
Bachelor of Communication Design
